

Subject : OPERATING SYSTEM (01CE0401)

Date : 09-Apr-2022

Time : 1 Hours 15 Minutes

Total Marks : 30

Instructions :

1. Attempt all questions.
2. Make suitable assumptions wherever necessary.
3. Figures to the right indicate full marks.

Que.1 Answer the following questions.

[6]

(A)

- (1) State the four conditions, which must occur to have deadlock in the system.
- (2) Explain Belady's anomaly.
- (3) Define page fault.
- (4) Define Binary semaphore.
- (5) List out various page replacement algorithms used for page replacement.
- (6) deadlock

Que.2

- (A) Write a short note on worst -fit, best-fit, first-fit, and next-fit strategies for disk space allocation with their merits and demerits. [6]
- (B) Explain Bounded Producer Consumer Problem without semaphore. [6]

OR

- (B) Explain mutual exclusion and any two solutions to achieve it. [6]

Que.3

- (A) Explain in detail deadlock prevention [8]
- (B) Consider the following RAG graph and find the safe sequence if there is no deadlock [4]

OR

- (A) A process references 5 pages A, B, C, D, E in the following order A; B; C; D; A; B; E; A; B; C; D; E. Assuming that the replacement algorithm is LRU and FIFO, find out the number of page faults during the sequence of references, starting with an empty main memory with 3 frames. Repeat for four page frames. [8]

(B) Explain kinds of file structure.

[4]

---Best of Luck---
